NOTE: EXTRA RUBBER WASHER (With the clear water filter.)

If you notice in the ceramic filter box there is an extra rubber washer 2 of them. ONE washer stays on the filter and the stem is threaded into the hole in the bottom of the top water tank. NOW turn the tank over and notice a red dot, NOW place the SECOND rubber washer on the threaded end of the ceramic filter stem up against the bottom of the water tank. SO, you end up with a rubber washer on either side of the top water tank, now slip the threaded end of the ceramic filter through the hole in the lid of the bottom tank. Look for the 2nd red dot as these should be on TOP of each other and as close as possible for this assembly to be correct. Now hand tighten the plastic nut onto the threads of the ceramic filter and tighten snugly against the lid and you are done.

WARNING: THESE CERAMIC FILTERS ARE VERY FRAGILE
